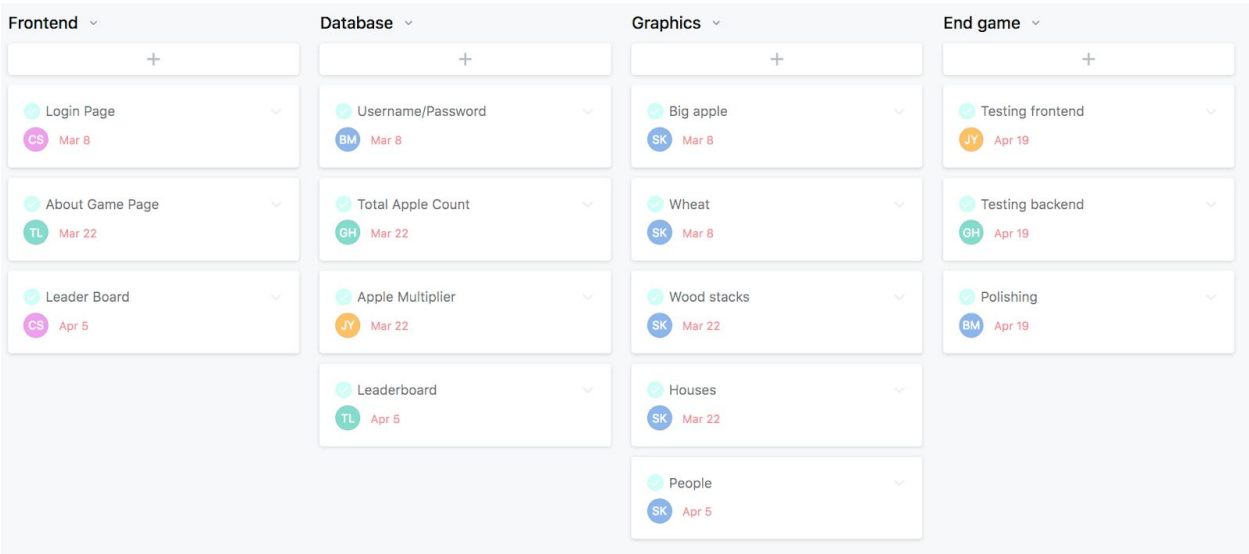
Title: Clickers Anonymous

Who: Benjamin Morris, Christian Soto, Graham Harper, Justin Yun, Story Kiser, Thomas Langsfeld

Project Tracker: Asana (https://asana.com/)



Video:
https://drive.google.com/file/d/1FL9uILX_rhngF9zDb5gQ42taJa3N94bC/view?usp=sharing
If this link doesn't work, please email story.kiser@colorado.edu or any other members of the group and we can get you the video some other way. The file was too big to put on github even compressed.

VCS: https://github.com/clickersanonymousCU/clickersanonymousCU.github.io

Contributions by each member:

- Benjamin Morris

..

app	style changes and apples per second update	3 days ago
config	style changes and apples per second update	3 days ago
public	added backend	5 days ago

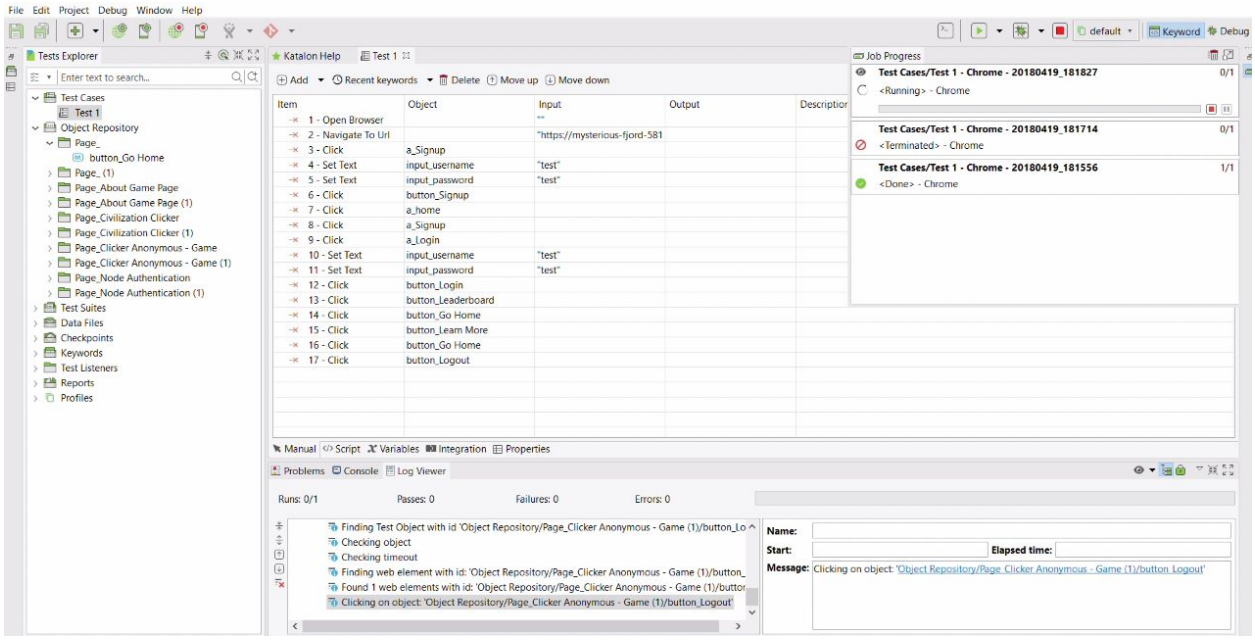
Benjamin Morris
Story Kiser

CSCI-3308 Milestone 5

Create a document that describes how at least three features within your finished product will be tested. The test plan should include specific test cases (user acceptance test cases) that describe the data and the user activity that will be executed in order to verify proper functionality of the feature.

1. Test signup page- test whether username is unique, new names are added, success message given. Test cases: signup with existing username, sign up with new username.
2. Test score update process- updated on logout, message to warn of unsaved data trying to exit before logout. Check database after logout, after window close without logout
3. Test leaderboard accuracy- check ordering, set new highscore to verify update.

Provide a link to the tool you use to automate testing, or explain how to run the automated test cases or schedule time with the TAs to demonstrate your automated tests. Provide a copy of the output showing the results of the automated test cases running.
Automation tool: https://www.katalon.com/
Screenshots of automation testing output:



- Justin Yun
